Title

HIGH-AFFINITY MELATONIN RECEPTOR AND USES THEREOF

Commissioner for Patents Washington, D.C. 20231

RESPONSE

In response to the action mailed March 24, 2000, please amend the application as follows:

In the Claims:

Cancel claims 18-30 and 36.

- 33. (Amended) A method of testing a candidate compound for the ability to act as an agonist of a high affinity melatonin receptor ligand, said method comprising:
- a) contacting said candidate compound with a mammalian cell which expresses on its surface a recombinant high-affinity melatonin receptor protein or melatonin binding fragment or analog thereof;
 - b) measuring intracellular cAMP concentration in said cell; and
- c) where said contacting causes a decrease in intracellular cAMP concentration, identifying said candidate compound as an agonist of a high affinity melatonin receptor ligand [where said contacting causes a decrease in intracellular cAMP concentration].
- 34. (Amended) A method of testing a candidate compound for the ability to act as an antagonist of a high affinity melatonin receptor ligand, said method comprising:
